

THE EFFECTS OF THE 1980
REVENUE ACT ON THE
INVESTMENT TAX CREDITS

BY
JAMES H. HANSEN

This paper examines the effects of the 1980 Revenue Act on the investment tax credits. It uses a sample of firms that filed returns for 1979 and 1980 to estimate the effect of the Act on the investment tax credit. The results show that the Act had a significant effect on the investment tax credit, increasing it by approximately 10 percent. This increase was particularly large for firms that were in the manufacturing and mining industries. The results also show that the Act had a significant effect on the investment tax credit for firms that were in the manufacturing and mining industries. The results also show that the Act had a significant effect on the investment tax credit for firms that were in the manufacturing and mining industries.

Investment tax credit
1980 Revenue Act

1. INTRODUCTION

The 1980 Revenue Act (P.L. 96-347) made significant changes to the investment tax credit. The most important change was the elimination of the 10 percent credit for new investment in manufacturing and mining property. This change was effective for investments made after December 31, 1980. The Act also increased the credit for new investment in manufacturing and mining property to 15 percent for investments made before December 31, 1980.

Key words:
Investment tax credit
1980 Revenue Act

The purpose of this paper is to estimate the effect of the 1980 Revenue Act on the investment tax credit. To do this, we use a sample of firms that filed returns for 1979 and 1980. We estimate the effect of the Act on the investment tax credit by comparing the investment tax credit for firms that were in the manufacturing and mining industries in 1979 and 1980. The results show that the Act had a significant effect on the investment tax credit, increasing it by approximately 10 percent. This increase was particularly large for firms that were in the manufacturing and mining industries.

QUESTION

1. The first part of the report is a general introduction to the project. It discusses the purpose of the project, the scope of the work, and the organization of the report.

2. The second part of the report is a detailed description of the methods used in the study. It includes a discussion of the data sources, the sampling procedure, and the statistical techniques used to analyze the data.

3. The third part of the report is a presentation of the results of the study. It includes a discussion of the descriptive statistics, the results of the hypothesis tests, and the conclusions drawn from the data.

4. The fourth part of the report is a discussion of the implications of the findings. It discusses the theoretical and practical implications of the results and suggests directions for future research.

5. The fifth part of the report is a conclusion. It summarizes the main findings of the study and provides a final assessment of the project.

1. The diagram shows a rectangle with a vertical line drawn from the center of the top edge to the bottom edge. This line divides the rectangle into two equal parts. The area of the rectangle is 100 square units. What is the area of each of the two parts?

Question 2

2. A line segment is divided into two parts. One part is labeled x and the other part is labeled y . The total length of the segment is 10. Write an equation for x and y .

3. A line segment is divided into three parts. The lengths of the parts are a , b , and c . The total length of the segment is 15. Write an equation for a , b , and c .

4. A line segment is divided into four parts. The lengths of the parts are d , e , f , and g . The total length of the segment is 20. Write an equation for d , e , f , and g .

5. A line segment is divided into five parts. The lengths of the parts are h , i , j , k , and l . The total length of the segment is 25. Write an equation for h , i , j , k , and l .

6. A line segment is divided into six parts. The lengths of the parts are m , n , o , p , q , and r . The total length of the segment is 30. Write an equation for m , n , o , p , q , and r .

7. A line segment is divided into seven parts. The lengths of the parts are s , t , u , v , w , x , and y . The total length of the segment is 35. Write an equation for s , t , u , v , w , x , and y .

8. A line segment is divided into eight parts. The lengths of the parts are z , aa , bb , cc , dd , ee , ff , and gg . The total length of the segment is 40. Write an equation for z , aa , bb , cc , dd , ee , ff , and gg .

9. A line segment is divided into nine parts. The lengths of the parts are hh , ii , jj , kk , ll , mm , nn , oo , and pp . The total length of the segment is 45. Write an equation for hh , ii , jj , kk , ll , mm , nn , oo , and pp .

10. A line segment is divided into ten parts. The lengths of the parts are qq , rr , ss , tt , uu , vv , ww , xx , yy , and zz . The total length of the segment is 50. Write an equation for qq , rr , ss , tt , uu , vv , ww , xx , yy , and zz .

4. Description of the process shown in the diagram above: _____

5. Additional notes or observations regarding the process: _____

6. Conclusion or final remarks: _____

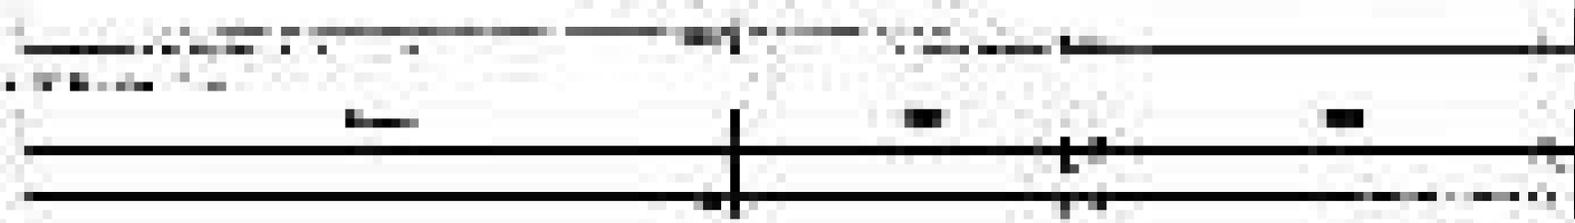

7. Signature: _____

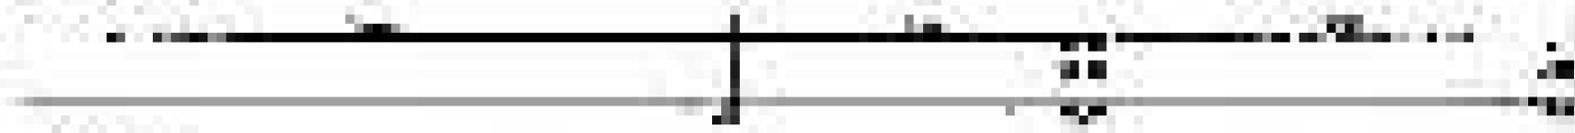

8. Final comments or suggestions: _____

QUESTION 1

1.1 Draw the shear force diagram (SFD) for the beam.

1.2 Draw the bending moment diagram (BMD) for the beam.

1.3 Determine the maximum shear force and the maximum bending moment in the beam.

1.4 Determine the position of the maximum bending moment in the beam.

1.5 Determine the position of the zero shear force point in the beam.

1.6 Determine the position of the maximum slope in the beam.

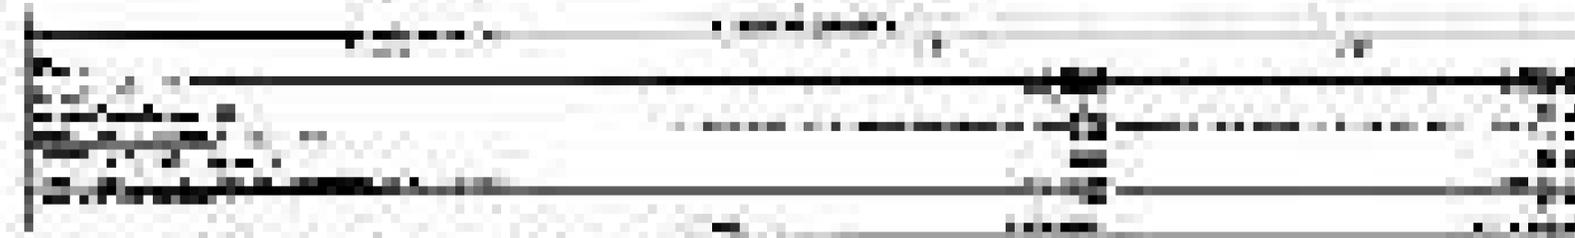

1.7 Determine the position of the maximum deflection in the beam.

1.8 Determine the position of the maximum rotation in the beam.

1.9 Determine the position of the maximum displacement in the beam.

1.10 Determine the position of the maximum slope in the beam.

1.11 Determine the position of the maximum deflection in the beam.

2.1 Draw the shear force diagram (SFD) for the beam.

2.2 Draw the bending moment diagram (BMD) for the beam.

2.3 Determine the maximum shear force and the maximum bending moment in the beam.

2.4 Determine the position of the maximum bending moment in the beam.

2.5 Determine the position of the zero shear force point in the beam.
